

# Healthcare IT Staffing and Services

When it comes to Information Technology, few, if any, industries are more challenged than Healthcare. Consider:

*The ever-evolving need to meet growing regulatory mandates i.e., HIPAA; NPI; new transactions and versions of the X12 standards (5010) ; new codes; electronic records, etc.*

*A heterogeneous mix of homegrown legacy and state-of-the art information and middleware systems.*

*The need to integrate complex internal applications.*

*Increasing requirements to electronically exchange sensitive data with various external organizations.*

*The need to send and receive voluminous amounts of data in a secure and real-time fashion.*

*Unique business processes requiring a wide range of business, functional and technical skill sets.*

It is no wonder that the Healthcare industry's appetite for IT resources seems insatiable.

EDI Specialists can provide resources with experience in all commercial EDI translators, EAI platforms and ETL software. Products we work with include BizTalk, Tibco, webMethods, Gentran Integration Suite, GXS Enterprise Gateway, Seebeyond, Informix, etc.

EDI Specialists can also help with Quality Assurance resources who write test plans; perform end-to-end testing and validation, create documentation, etc.

We also provide subject matter experts, consultative resources and project managers to help clients achieve HIPAA and regulatory compliance. We can perform a full, strategic assessment of your environment including applications, infrastructure, organization, security & risk, etc.
